

Radiology Report

Oral and Maxillofacial Radiology
University of Iowa
College of Dentistry

Patient: Russell, William

Age: 9-4

Sex: M

Number: 4523

Date of Images: July 16, 2004

Type: 1 standard maxillary occlusal

Referring Dr.: Patrick Henry

Date of Report: July 20, 2004

Teeth Present

2?	3	4	6	7	8	9	10	11	12	13	14	15?
----	---	---	---	---	---	---	----	----	----	----	----	-----

Caries: G = Gross; M = Mesial; O = Occlusal/Incisal; D = Distal; F = Facial; L = Lingual/Palatal
(i) = Incipient; (R) = recurrent

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
32	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17

Orthodontic/Pediatric Assessment

The dental age and chronological age appear to coincide. The occlusal development is within the range of normal, except for the missing teeth noted above.

Other

The portrayed border of the maxillary sinuses appear to be intact; there is no evidence of antral pathosis.

The intermaxillary suture is diastatic by about 3 mm.

The generalized bone pattern is within the range of normal.
